Chronic toxicity	Fluopyram caused specific target organ toxicity in the liver in experimental animal studies. The effect is due to an overwhelmed metabolic capacity of the liver at high dose levels. Tebuconazole did not cause specific target organ toxicity in experimental animal studies.

Assessment Carcinogenicity

Fluopyram caused an increased incidence of tumours in the liver of rats at high dose levels.

Fluopyram caused an increased incidence of tumours in the thyroid of mice. The tumours seen with Fluopyram were caused through a non-genotoxic mechanism, which is not relevant at low doses. The mechanism that triggers tumours in rodents and the type of tumours observed are not relevant to humans.

Tebuconazole caused an increased incidence of tumours in the liver of mice at high dose levels. The mechanism of tumour formation in the liver of the mice is not considered to be relevant to man.
